This bulletin includes the updates from the Early Warning Reporting System (EWARS). It includes data since January 2016 till date, including comparison of same period during last year.

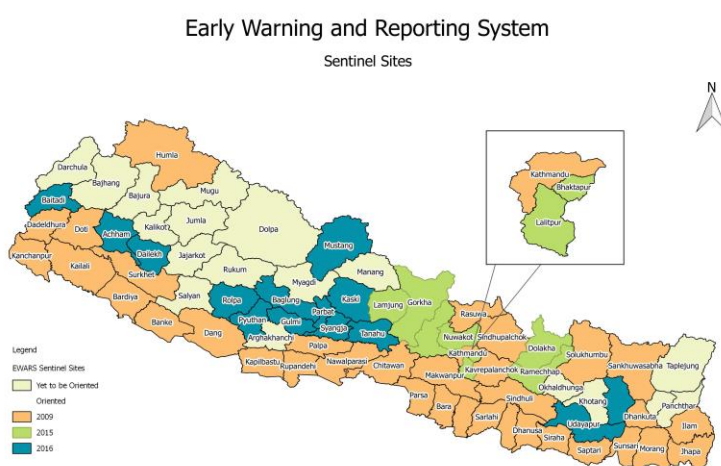

## Section 1: The Early Warning and Reporting System (EWARS)

### Highlights

- **Kala-azar:** Two cases of Kala-azar are reported this week from Janakpur Zonal Hospital, Dhanusha and the cases are from Gaidhabhetpur VDC of Mahottari district and Janakpur Municipality of Dhanusha district.
- **Malaria:** Two cases of Malaria are reported this week one each from Lumbini Zonal Hospital, Rupandehi and United Mission Hospital, Palpa and the cases are from Arghakhanchi and Kanchanpur district respectively.
- **SARI:** Two deaths from SARI are reported this week, one each from Kanti Children Hospital, Kathmandu and United Mission Hospital, Palpa. The deceased were from Bardiya and Rupandehi district respectively.
- No case of Dengue is reported this week.

The EWARS was established in 1997 to strengthen the flow of information on vector-borne and other outbreak prone infectious diseases from the district to Epidemiology and Disease Control Division (EDCD) and Vector-Borne Disease Research and Training Center (VBDRTC), Hetauda. Rapid Response Teams (RRTs) can be mobilized at short notice to facilitate prompt outbreak response at Central, Regional and District level. They can also support local level health institutions for investigation and outbreak control activities.

This information system is hospital-based and is currently operational in 61 hospitals (out of 82 sites) throughout Nepal (Figure 1). So far, the EWARS mainly focuses on the **weekly reporting** of number of cases and deaths (including "zero" reports) of six priority diseases/syndromes—Malaria, Kala-azar, Dengue, Acute Gastroenteritis (AGE), Cholera and Severe Acute Respiratory Infection (SARI), and other epidemic potential diseases/syndromes (like enteric fever). It equally focuses on **immediate reporting** (to be reported within 24 hours of diagnosis) of one confirmed case of Cholera, Kala-azar severe and complicated Malaria and one suspect/clinical case of Dengue as well as 5 or more cases of AGE and SARI from the same geographical locality in one week period.

## Reporting Status

Out of 61 functional EWARS sentinel sites, report was received from 39 sentinel sites (64 percent) whereas 22 sentinel sites did not report in 10<sup>th</sup> Epidemiological week of 2017. The reporting coverage is increased as compared to the previous week.
