This bulletin includes the updates from the Early Warning Reporting System (EWARS). It includes data since January 2015 till date, including comparison of same period during last year.

Section 1: The Early Warning and Reporting System (EWARS)

Highlights	
<ul style="list-style-type: none"> Event: Food Poisoning <ol style="list-style-type: none"> District: Chitwan Affected area: Kabilas VDC -9, Kusumtar. Onset: 25th April, 2016 Cases: 55; No death Responses: RRT mobilize from DPHO District: Nuwakot district, Affected area: Kahule VDC-6 & 8 Onset: 27 April, 2016 Cases: 52; 1 death Responses: RRT mobilize from DPHO Outbreak: ARI and diarrhea District: Humla Affected area: Raya and Syada VDC Onset: 19 April, 2016 Cases: ARI-145 cases(death:8) Diarrhoea-75 cases Responses: RRT mobilize from DHO 	
<ul style="list-style-type: none"> Two cases of Kala-azar are reported this week, one each from Koshi Zonal Hospital, Morang and District Hospital Siraha. The cases are from Danghihaat VDC of Morang district and Rajpur VDC of Siraha district. The number of AGE cases reported every week is in increasing trend. Last year, the cases of AGE peaked on week 17, so it is important to remain alert for new outbreak. No case of Dengue and Malaria is reported this week. 	

The EWARS was established in 1997 to strengthen the flow of information on vector-borne and other outbreak prone infectious diseases from the district to Epidemiology and Disease Control Division (EDCD) and Vector-Borne Disease Research and Training Center (VBDRTC), Hetauda. Rapid Response Teams (RRTs) can be mobilized at short notice to facilitate prompt outbreak response at Central, Regional and District level. They can also support local level health institutions for investigation and outbreak control activities.

This information system is hospital-based and is currently operational in 48 hospitals (out of 81 sites) throughout Nepal (Figure 1). So far, the EWARS mainly focuses on the **weekly reporting** of number of cases and deaths (including "zero" reports) of six priority diseases/syndromes—Malaria, Kala-azar, Dengue, Acute Gastroenteritis (AGE), Cholera and Severe Acute Respiratory Infection (SARI), and other epidemic potential diseases/syndromes (like enteric fever). It equally focuses on **immediate reporting** (to be reported within 24 hours of diagnosis) of one confirmed case of Cholera, Kala-azar severe and complicated Malaria and one suspect/clinical case of Dengue as well as 5 or more cases of AGE and SARI from the same geographical locality in one week period.

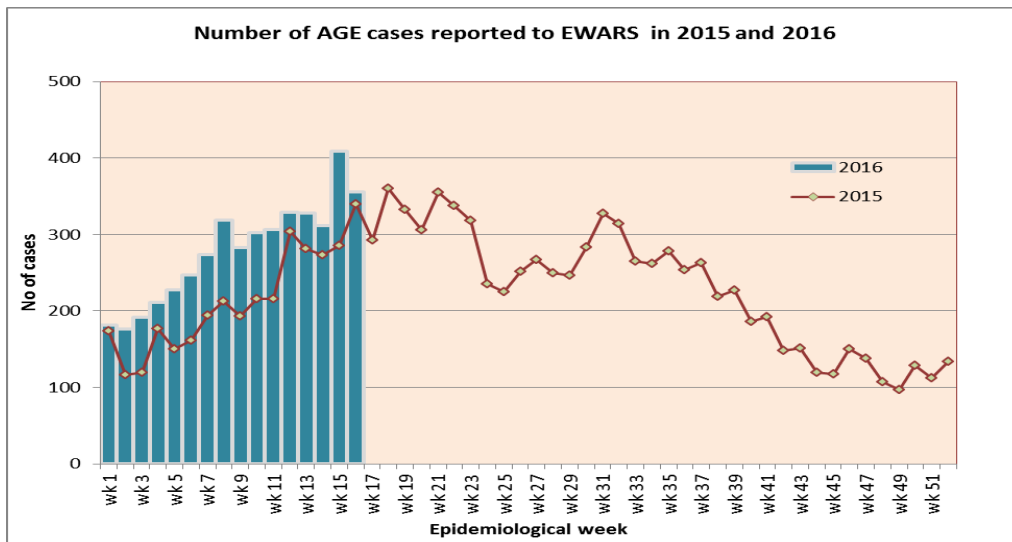

1.1 Acute Gastro-Enteritis and Cholera

356 cases of AGE are reported in 16th epidemiological week of 2016. Among 356 cases, the majority of cases are from Dolakha (50 cases), Kanchanpur (41 cases), Kathmandu (29 cases), Morang (22 cases), Rupandehi (18), and Dhading (16 cases) district. The number of AGE cases reported in 16th week this year exceeds the number of AGE cases reported in the same week last year (340 cases). Last year, the cases of AGE peaked on week 17, so it is important to remain alert for new outbreak.

No death from AGE is reported this week. Five deaths from AGE are reported so far this year.

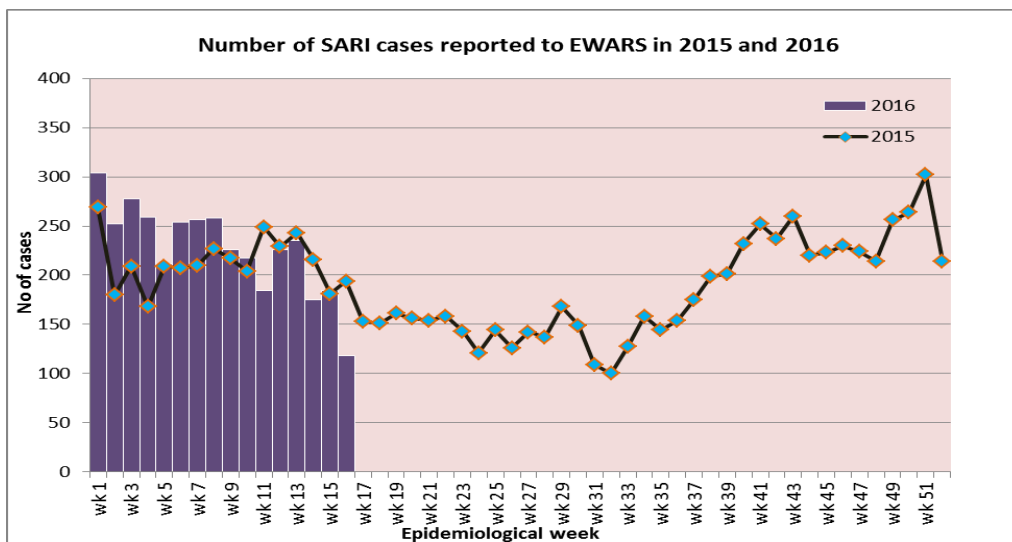

Cholera: No cholera cases are reported through the EWARS system this year.

1.2 Severe Acute Respiratory Infection (SARI)

118 cases of SARI are reported in 16th epidemiological week of 2016. The cases of SARI reported this week did not exceed the number reported in the same week last year (194 cases). Among 118 cases, the majority of cases are from Rupandehi (24 cases), Morang (19 cases), Jhapa (6 cases), Kapilvastu (6 cases), Lalitpur (6 cases) and Nawalparasi (6 cases) district.

No death from SARI is reported this week. Twenty three deaths from SARI are reported so far this year.

1.3 Enteric Fever

23 cases of enteric fever are reported this week including 6 from Saptari, 3 from Dolakha, and 2 each from Kapilvastu, Lamjung, Sindupalchok, Siraha and Tanahu district. The number of cases of enteric fever was peaked in week 37 in 2015 (71 cases).

1.4 Malaria

No case of Malaria is reported this week. Only two cases of malaria are reported so far this year. Ninety cases of Malaria were reported through EWARS in 2015.

1.5 Dengue

No case of Dengue is reported this week. Only one case of dengue is reported so far this year. Fifty-eight cases of Dengue were reported through EWARS in 2015.

1.6 Kala-azar

Two cases of Kala-azar are reported this week, one each from Koshi Zonal Hospital, Morang and District Hospital Siraha. The cases are from Dangihaat VDC of Morang district and Rajpur VDC of Siraha district. Thirty one confirmed cases of Kala-azar are reported so far this year. 135 cases were reported through EWARS in 2015.

Acknowledgement

The Epidemiology and Disease Control Division highly acknowledges the contribution from all the medical recorders, EWARS focal persons, rapid response team members and support from WHO and NHSSP for preparation of this bulletin.

Timeliness & completeness of reporting from sentinel sites:
