

Early Warning and Reporting System (EWARS)

Weekly Bulletin

(8th Epidemiological Week)

1 March 2020

Government of Nepal
Ministry of Health and Population
Department of Health Services
Epidemiology and Disease Control Division
Kathmandu, Nepal
ewarsnepal@gmail.com

Note: This bulletin includes data since January 2020 till date, including comparison of same period during last year. It also includes data from the existing sentinel sites as well as from some of the recently expanded 36 new sentinel sites (including public hospitals, private hospitals and medical colleges).

The Early Warning and Reporting System (EWARS)

Highlights

One case of Novel Corona Virus (nCoV) has been confirmed in Nepal. The case traveled to Nepal from Wuhan, China. Currently, the case is on good health and is under surveillance. The health desk at Tribhuvan International Airport and other Point of Entries (PoE) has been strengthened with health workers and logistics.

Severe Acute Respiratory Infection (SARI): 223 cases of SARI are reported this week. The majority of these cases are from Morang (27 cases), Jhapa (25 cases), Lalitpur (14 cases), Dang (14 cases), and Kathmandu (10 cases).

Acute Gastro-Enteritis (AGE): 258 cases of AGE are reported this week. The majority of these cases are from Lalitpur (33 cases), Dolakha (21 cases), and Kathmandu (21 cases).

The EWARS was established in 1997 to strengthen the flow of information on vector-borne and other outbreak prone infectious diseases from the district to Epidemiology and Disease Control Division (EDCD) and Vector-Borne Disease Research and Training Center (VBDRTC), Hetauda. Rapid Response Teams (RRTs) can be mobilized at short notice to facilitate prompt outbreak response at Central, Regional and District level. RRTs can also support local level health institutions for investigation and outbreak control activities.

This information system is hospital-based. So far, the EWARS mainly focuses on the **weekly reporting** of number of cases and deaths (including "zero" reports) of six priority diseases/syndromes—Malaria, Kala-azar, Dengue, Acute Gastroenteritis (AGE), Cholera and Severe Acute Respiratory Infection (SARI), and other epidemic potential diseases/syndromes (like enteric fever). It equally focuses on **immediate reporting** (to be reported within 24 hours of diagnosis) of one confirmed case of Cholera, Kala-azar severe and complicated Malaria and one suspect/clinical case of Dengue as well as 5 or more cases of AGE and SARI from the same geographical locality in one-week period.

1.1 Acute Gastro-Enteritis (AGE) and Cholera

258 cases of AGE are reported this week. The majority of these cases are from Lalitpur (33 cases), Dolakha (21 cases), and Kathmandu (21 cases). 273 cases of AGE were reported this week in 2019.

1.2 Severe Acute Respiratory Infection (SARI)

223 cases of SARI are reported this week. The majority of these cases are from Morang (27 cases), Jhapa (25 cases), Lalitpur (14 cases), Dang (14 cases), and Kathmandu (10 cases). 244 cases of SARI were reported this week in 2019.

1.3 Malaria

One malaria cases is reported this week Surkhet. One case of Malaria was reported this week in 2019.

1.4 Dengue

Three cases of dengue are reported this week – One each from Rupandehi, Kapilbastu and Dadeldhura. One case of Dengue was reported this week in 2019.

1.5 Kala-azar

Six cases of kala-azar are reported this week. Two from Baglung, one each from Okhaldhunga, Syangja, Palpa and Dadeldhura. Three cases of Kala-azar were reported this week in 2019.

Other diseases

Scrub typhus

Three cases of Scrub typhus are reported this week, one each from Dhading, Kapilbastu and Kailali. Two cases of Scrub typhus were reported this week in 2019.

Acknowledgement: The Epidemiology and Disease Control Division highly acknowledges the contribution from all the sentinel sites, medical recorders, EWARS focal persons, rapid response team members.

Note: This bulletin is also available at EDCCD's website www.edcd.gov.np.

Thank you.
